

67.010-095  
B05799-AT1

**Amendments to the Specification:**

Please replace paragraph [0010] on page 3, with the following paragraph:

[0010] An example method of controlling power distribution using an engine starting system that has a permanent magnet motor associated with the engine includes coupling the motor to a power source using a first phase ~~controller~~-controlled rectifier while starting the engine. Coupling the motor to a load using a second phase controlled rectifier provides power generated by the motor to a load when the engine is running.
